SKILLS

- Frontend:** React.js, Next.js, JavaScript, TypeScript, Tailwind CSS
- Backend & APIs:** Node.js, Express.js, Python, Flask, Go, REST APIs, Webhooks
- Databases & Caching:** PostgreSQL, MongoDB, Firebase Firestore, Redis
- Cloud & DevOps:** AWS, Azure, Docker, Terraform, Jenkins, GitHub Actions, Linux
- Security & Architecture:** RBAC, JWT, API Authentication, System Design
- Programming Languages:** Java, Python, JavaScript, TypeScript, Go, Swift, Kotlin

LANGUAGES

- English (Fluent)
- Burmese (Native)

PROFILE

Final-year Computer Science student specializing in Software Engineering, **graduating October 2026**, with hands-on full-stack experience using React, Next.js, TypeScript, Node.js, Go, Python, REST APIs, PostgreSQL, Docker, and AWS. **CTO of GlowOps**, a LINE-first AI operations platform for SMEs and **winner of TrueLAB Open Innovation Runway 2026** — now running in production on AWS with a live pilot. Delivered a client school-management platform end to end and currently building AI agent and workflow automation as a software engineering intern. Experienced in translating business requirements into database-backed applications, API workflows, and maintainable software solutions. Seeking a **Software Engineer** role contributing across frontend, backend, database, and cloud development.

EXPERIENCE

- GlowOps - CodeBlue Team** April 2026 - Present (CTO)
 - Website: glowops.codeblue.software
 - Winner**, TrueLAB Open Innovation Runway 2026; advanced to \$100,000 ScaleX stage.
 - Architect a LINE-first AI booking platform for beauty and wellness SMEs — channel gateway, rules-first AI orchestrator, availability and deposit engines.
 - Shipped to production on AWS with automated releases and nightly backups; live pilot with 2 businesses.
- NNPC Consulting Co., Ltd.** August 2026 - Present (Software Engineering Intern)
 - Build and test AI agent workflows automating internal business and operational processes; integrate AI tooling with existing systems and support prototyping, testing, and deployment.

PROJECTS

- JTTrax — Chess School Management Platform (Client Project)** July 2026 - Present
 - Website: jttrax-web-app.vercel.app | jttrax-admin.vercel.app
 - Go REST API with role-scoped SQL authorization; Next.js admin, web, and mobile clients
 - Fine-tuned Maia-2 into a human-like chess opponent matched to each student's level
 - Led architecture and delivery across 5 services: backend, admin portal, web, mobile, and ML
- AUGO (iOS - Social Media with AR Interaction)** 2/2025 Semester
 - GitHub: github.com/Kusk24/AuGo
 - Team project: iOS social media app with AR collectible capturing using SwiftUI & Firebase
 - Features: AR camera with device motion tracking, holographic cards, campus map, announcements, leaderboard system
 - Auth, Keychain, modular design, SPM libraries
- Database Backend (Flask, PostgreSQL)** 2/2024 Semester
 - GitHub: github.com/SoePhonePyae/Database-Backend
 - Developed RESTful backend API for GameRental app using Flask and SQLAlchemy
 - Managed customer, staff, and admin PostgreSQL databases; role-based access control
